

ZIMMER MEDIZINSYSTEME GMBH

ZWAVE

Application Cellulite and stretch marks

Zimmer MedizinSysteme has introduced ZWave for cellulite treatment with high-energy radial shockwaves. The high energy radial shockwaves scientifically proved to have a large impact on collagen structure and the skin connective tissue, improving blood circulation. It stimulates collagen formation, while the skin becomes more elastic and its firmness is visible after only a few treatments. ZWave is the most compact high-energy radial shockwave system available and comes with all necessary accessories.

MAYA BEAUTY ENGINEERING S.R.L.

GAS CONTOURING®

Application Body shaping and facial contouring

Gas Contouring® is a very effective and totally painless gas-assisted body shaping and facial contouring technique. Developed by Maya Beauty Engineering in 2011, this innovative method exploits the specific effects of two gas-based technologies: Oxy Xtra Med and Venusian CO₂ Therapy. Oxy Xtra Med is able to inject, without the use of needles, molecules of oxygen and active ingredients inside the vascular glomus. Once inside the skin, the gas acts on microcirculation, on adipose tissues and on skin tissues: epidermis and derma. Unique characteristic of Oxy Xtra Med is

to act without needles. Venusian CO₂ therapy administers a regulated flow of medical carbon dioxide by subcutaneous injections effected with extremely small needles. Unique characteristic of Venusian CO₂ Therapy is the special programme for the complete control of the gas temperature (pain management). Clinical studies have demonstrated the effects of the gases on microcirculation, adipose tissue, and the skin. The results are the increase of skin elasticity and hydration, as well as a clear reduction of localised fat deposits.
