

Trios

Trios™ was developed by Viora's research and development team, with over two decades of engineering experience in intense pulsed light (IPL) based systems. Trios empowers your business by providing you with a variety of aesthetic applications including long-term hair removal, photorejuvenation, acne clearance and skin pigmentation treatments that target sun damage and age spots. Trios was designed to ensure that practitioners are equipped with a system that delivers uncompromising performance, safety and efficacy on all levels.

Duetto MT

Quanta System is proud to introduce the new Duetto MT laser system featuring exclusive mixed technology, delivering alexandrite 755 nm and Nd:YAG 1064 nm simultaneously or sequentially to perform treatments on every type of skin. With spot sizes up to 16 mm, 85 W of average optical power and increased speed, Duetto MT is one of the most cost-efficient aesthetic platforms for skin rejuvenation, vascular and hair removal treatments. Through its Universal TWAIN connector Duetto MT can be upgraded with TWAIN 2940 Er-YAG and IPL handpieces.

Ellipse MultiFlex+

Ellipse IPL systems offer clinically proven, safe and effective treatments for hair removal, vascular and pigmented lesions, photorejuvenation and acne. The new Ellipse MultiFlex+ incorporates an Nd:YAG laser with integrated cooling for leg and larger facial vessels. The unique combination of dual-mode filtering, square pulse and built-in clinical intelligence, allows users to select perfect treatment parameters. The new PLUS range of applicators offer a longer lifetime, lower running costs and enhanced ergonomics.

Ellansé Dermal Filler Family

Ellansé™, a unique PCL particle dermal filler, comes in four variants (S, M, L and E), each with an individual duration of action varying from 12 months (Ellansé S), up to four years (Ellansé E). This range of dermal fillers supports safe and cost-effective treatments in aesthetic medicine and surgery, through immediate and sustained performance, tunable longevity and total bioresorbability (STAT Technology™). Ellansé acts as a biostimulator, helping patients generate their own new collagen (neocollagenesis). According to desired longevity of results, physicians can choose between the variants proposed for their patients from a single vendor.

Gas Contouring

Gas Contouring® is a very effective and painless gas-assisted body shaping, facial contouring and lifting technique combining Oxy Xtra Med: no-needle injection of oxygen molecules and active ingredients inside the vascular glomus and Venusian CO₂ therapy: subcutaneous injections of medical carbon dioxide. Pain management is ensured by controlling gas temperature. Gas Contouring causes re-opening and re-activation of closed or malfunctioning pores, increased oxygen percentage in the tissues, a breakdown of fat cell membranes, reduction of fat deposits and improvement of skin elasticity.
