

**Legato QZ**

Legato QZ, a rapid, gentle, dual mode diode laser system is medically proven to deliver permanent hair reduction. The Fast Hair Removal mode has a fixed speed of 10 Hz with integrated skin cooling, making treatment painless and effective. The gold standard 810 nm works in the Smooth Hair Removal mode with a fixed speed of 1 Hz for treating smaller areas. The Legato QZ laser hair removal procedure is much shorter than other methods and technological advancements mean patients can carry on with their daily routine with no downtime.

**Venusian CO<sub>2</sub>**

Venusian CO<sub>2</sub> therapy is a class IIb medical device performing Carboxy Therapy, a safe and effective face and body treatment. Venusian allows control of the gas temperature for pain management, and of gas purity, quantity and quality. The results on microcirculation include re-opening and reactivation of closed or malfunctioning capillaries, and increased oxygen in the tissues. For adipose tissue, an excellent lipoclastic effect and reduction of fat deposits occur. For skin, the stimulation of fibroblasts and production of collagen produce visible improvement in skin elasticity.

**K Ceutic**

Dermaceutic Laboratory is proud to announce the launch of the new K Ceutic formula. Ideally formulated to support non-ablative laser or peeling treatments, the new K Ceutic enables optimal skin recovery; minimizing edema and erythema. K Ceutic is fragrance free, without parabens and includes a new UV filter (oxybenzone and octocrylene free). Its unique, highly-concentrated blend of active ingredients provides optimal repair. Dermaceutic is a manufacturer of leading non-invasive aesthetic dermatology products, recognized by physicians for efficacy and safety.

**SECRET and VIKINI**

The SECRET micro-needle fractional radiofrequency (RF) system is designed based on synergistic effects of precisely controlled bi-polar RF plus minimally invasive micro-needles for non-surgical face-lifting, wrinkle reduction and scars by dermal coagulation. VIKINI is a high powered 808 nm diode laser for permanent hair removal. A more enhanced power level (600 W) provides a shorter pulse width so that it reduces patient pain. Collimating lenses uniformly radiate direct wave so that the treatment area can be precisely targeted.

**Anteis Injection System**

Anteis has received the Frost & Sullivan 2011 European New Product Innovation Award in Aesthetic Fillers for the Anteis Injection System (AIS), a breakthrough device for administering dermal fillers and rehydration products. The AIS is an automated electronic system for injectable gels with enhanced features for depth, injection speed and volume control, delivering unprecedented results. It allows a very smooth and constant injection of product and has been proven effective both in reducing pain and decreasing the amount of bruising, swelling and side effects commonly seen with other injection techniques.

**Ultherapy**

Ultherapy® is a new category of treatment that uses micro-focused ultrasound with visualization to treat lax skin. It is the only technology with an FDA indication for non-invasive lift. During treatment, energy is precisely deposited at multiple depths to heat tissue in the dermis and underlying fibro-muscular layer. This energy doesn't affect the skin's surface, so treatments are completed a single 60 minute session without patient downtime. The result is a multi-dimensional lift that begins at the skin's foundation.
